

Wind & Climate Consulting

Key Milestones

08/2025

Wind & Climate Consulting platform
acquired GEO-NET

The Wind & Climate Consulting Platform serves a broad range of private and public sector clients with wind energy and climate ecology assessments as well as measurement campaigns

Business Description & Growth Drivers

GEO-NET caters to both the build-out of onshore wind power, as well as the growing demand for climate analyses and adaptation concepts in urban and real estate development.

Leveraging its sophisticated data model, the platform offers wind energy yield assessments, risk analyses, and adaptation concepts in the field of climate meteorology

Growing wind project pipeline, demand for bankable wind studies, rising need for climate adaptation planning

Footprint & KPIs

750+
Wind energy projects p.a.

Buy & Build Profile

Target Markets

Wind energy consulting and adjacent value chain
Climate consulting and digital tools

Minimum EBITDA
EUR 1 million

Geographic Focus
DACH, France, Nordics, and selectively pan-European

Service Offering

Wind energy assessments

First stage and bankable wind energy yield assessments, stability opinions, operations yield confirmation opinions

Climate meteorology assessments

Heat, rain, air and other climate related climate analyses, climate risk analyses, climate adoption concepts

Measurement campaigns

Execution of wind & climate measurement campaigns, and installation of permanent measurement hardware

Impact

Electrification

> 8'000 tons p.a.
CO₂ avoidance / EURm invested

Substitution of fossil fuel energy by scaling competitive wind power generation globally, and supporting climate adaption
